

Conrad Parker

SENIOR .NET / AZURE DEVELOPER & TEAM LEAD

Independent senior .NET & Azure developer with 30+ years delivering business-critical software — from CO2 refrigeration pricing platforms to banking mobile apps that passed security review first time. I run my own software consultancy and have delivered remotely for clients across Europe, combining hands-on engineering and team leadership with the Agile, CI/CD and DevOps discipline that helps teams ship quality faster.

EXPERIENCE

Advansor — Senior Developer & Team Lead

May 2023 - Present

Engaged by Advansor as lead developer on Integra, the platform used to specify and price their CO2 refrigeration and heat-pump systems. Act as the day-to-day lead on the project, working directly with the client to plan and coordinate the work, mentor a junior developer, and bring structure to the team's delivery process on Azure DevOps — Kanban, quality gates and CI/CD.

Build full-stack features across the Integra suite (Portal, UI and API) in C#, .NET, Azure and modern JavaScript.

Pension Partner — Tech Lead

June 2022 - March 2023

Led a team of 4 developers to deliver a web-based version of an established pension calculation and modelling suite, successfully onboarding multiple customers in the months after launch.

Designed the underlying architecture to support customer-specific functionality on top of a shared core, enabling tailored deployments for each client without forking the codebase.

Novicell — Software Developer / Tech Lead

May 2019 - May 2020 · Feb 2021 - June 2022

Delivered and extended Advansor's CO2 refrigeration quoting and configuration application, used to specify and price installations for major European food retailers including Aldi and Carrefour. Returned to contribute across further projects, including a fleet-positioning platform for a Danish bus operator and an automotive-parts tracking system.

Kustodian — Software Developer

May 2018 - May 2019

Built chain-of-custody software for fertility clinics, tracking individual vials stored in liquid-nitrogen Dewars — a clinical workflow where a single misidentification is unacceptable.

Aspen Grove Solutions, Ireland — Team Lead

November 2008 - April 2018

Led an agile team to deliver a cross-platform mobile app for Wells Fargo that passed the security acceptance review on first submission.

Designed, built and delivered a scalable CI/CD pipeline that automatically deployed and tested hundreds of production services.

Took over an underperforming cross-functional team and turned it around to deliver consistently within estimates.

Contractor, London — Software Developer

1990 - October 2008

T-Mobile, BT, Williams Lea, Live Nation, Serco, E-map, Scoot, UltraIT, Uxbridge College, Data Liberation, Hatfield University, EPCoT Systems,

RockPaperScissors (.NET C#)

d3-dewar (JavaScript)

Travelscene UK.

Working on various contracts mostly in and around London. The highlights were:

- 4 years with BT helping to deliver their phone book across the UK.
- Designed and delivered the internal T-Mobile news website and their online health and safety questionnaire.
- Helped to deliver the content management and front end of the FHM website at E-map.
- Saw and survived the dot-com boom and bust.

EDUCATION

Chipping Norton Comprehensive School, Oxon — 10 GCSE's

1977 - 1988

OUTSIDE WORK

Happily married with 2 kids who keep me busy in my spare time. Due to these "commitments" I am only allowed out after work on Fridays unless special permission is obtained.
